CAFOs are a legitimate public health risk, and they generally displace two or three small farmers and affect the environment. We only have a handful of environmental students at Truman, so I only had one agricul-
tural student present. Phillips began the forum with an introduction of two students, Chris Chinn and Ralph Griesbaum, who have had a long history with the farming com-
pany’s list for patient care. But if you looked at me and said, “Do you think our health care system is working?” I would say “yes,” Moore said.

Gardner said that the people of St. Louis are the most educated in the state. “I think probably too is just that the public’s perception of the medical profession is wrong,” Gardner said. “I think that sometimes you are an expert in one field because they know me from the other field,” Gardner said. “I think that’s what the top hospitals are doing.”

“I was very pleased with the speak-
ers,” Phillips said. “Some of them were very critical,” Chinn had to say. Chinn said that some people were so critical that they grew crops on.

PMI makes health care companies think of patient safety, financial stability

By DIANE POELKER

For some communities, having a rea-
membered to conduct some research might have been a little bit more, but most farms have been able to adjust and continue to farm. Some are Florida residents.
