City construction projects for sewers, sidewalk in progress

BY MARIA KAESS

An estimated construction season year, Kirksville residents are seeing evidence of that growth, as the city construction projects approach completion. On the square, the new sidewalk project is underway. Neighbors planted trees and broccoli, and helped enforce social distancing during the lock-down period.

Kirksville resident Buck rake Ranson, city engineer and city manager, suggests that the projects are a sign of progress for the city.

"Kirksville residents are seeing evidence of that growth, as the city construction projects approach completion," Ranson said. "Neighbors planted trees and broccoli, and helped enforce social distancing during the lock-down period.

Kirksville is set to be the location of a DNA lab, which would be able to offer services to Kirksville and other surrounding areas. The lab will be used for criminal identification and will be able to perform DNA testing at a reduced cost.

"Kirksville residents are seeing evidence of that growth, as the city construction projects approach completion," Ranson said. "Neighbors planted trees and broccoli, and helped enforce social distancing during the lock-down period.

Kirksville residents are seeing evidence of that growth, as the city construction projects approach completion."
