Children from the Maison tribe in Haiti, Kenya, play in their schoolyard. Members of the tribe have to travel about three miles to the nearest water source.

GlobeMed group sets sights for service in Haiti

(by ALEX BOLES)

The University’s GlobeMed organization is spreading the word about clean water.

GlobeMed began in the fall with a speaker to inform and recruit members. The group met on Monday and Wednesday mornings and has grown to 18 active members.

The organization is studying the health impact of contaminated drinking water in the United States. They're planning a trip to the Dominican Republic in the spring of 2008.

“Doctors have the chance to help people realize the impact of water quality in their own community and the world,” said Emily Krogmann, junior.

### Just the idea of giving up all of your beverages and drinking only tap water — it’s a sacrifice and we think people will think about it more.

“Actually, the fact that we have tap water and people in Africa don’t have it whenever we want it is our motivation to give,” said Emily Krogmann.

“I think it’s really important to get students thinking about how much water we take for granted,” said Vice President senior Gabe Buxton.
