A new class will ask students to multitask by earning college credit and actively pursuing an interest. "The class is to lower and eventually eliminate Truman's carbon footprint," Josh Mantooth, Professor of Biology Michael Truman's carbon footprint.

The NWF awarded the grant to increase student awareness and activity. "Any major is welcome, and we are always looking for opportunities to make a change," Mantooth said. "We don't need necessarily a strong chemistry or biology background."

"Any person interested in this subject are encouraged to contact Kelrick and attend an informational meeting about the class taking place within the next week."

A "Lot of a part of becoming a greener Truman campus."
