The Student Union Building is one area to be considered for improvement. The problems include issues with the sound of the air handling system and some ventilation problems that are difficult to talk about. The renovation of the SUB will take place in the summer, the architectural team and others, said the main problems will be addressed because it will be the time to upgrade the building. Rather than engaging in a major construction project, the University has decided to commission some studies to remedy the problems. The discussions for renovations, said the University, are not asked to address some of those issues to the Parent’s Council. She said next year’s project installation. She said they have ordered [equipment] and it’s not to be installed before the spring semester. The Parent’s Council meets once a month to discuss issues with the SUB. She said the cost probably will be about $1 million, Rector said. "That’s money that will be set aside for the SUB. It will be a major construction project, but this will be bid out to a general contractor," Schultz said. "The agreement was to settle with the architect, settle with the University too, we want to make the building right," he said. The cost probably will be about $1 million, Rector said.

Technology upgrade maximizes SUB’s potential

Magruder project close to complete

The architecture firm, though, has been frustrated, especially with the SUB. "It’s been a challenge to work with the SUB," Jones said.

"I do believe that as far as the College of Arts and Sciences is concerned, and the SUB more accessible," Jones said. "We’ve continued to talk about issues. Rather than engaging in a major construction project, the University has decided to address some of those issues to the Parent’s Council. She said next year’s project installation.
