MoDOT pushes plan for alternate route

Alternate Route 63 is finally in the works after almost 60 years since the idea of a bypass was discussed. In 1948, the Missouri Department of Transportation began planning for a four-lane bypass of Kirksville High School for the purpose of reducing traffic congestion in the downtown area. The meeting informed workers and residents about the proposed route, construction of the alternate route, and the benefits the project would bring to the community. The meeting also discussed the potential for additional routes and the need for more feedback from the public.

According to information presented at the meeting, the originally proposed green route costs almost $8 million less than the red route. The green route aligns with the existing alignment of Alternate Route 63, and it includes the Inner Circle, which receives the least traffic.

The green route alternates the existing alignment of Route 63 from the south wall of Kirksville High School to the southwest corner of the town square. The green route minimizes the impact on the community, including the Inner Circle, and the airport, and it also has minimal environmental impacts, according to MoDOT.

The green route aligns with the existing alignment of Route 63, and it includes the Inner Circle, which receives the least traffic. The green route also affects three lakes or streams fewer than the red route and has minimal environmental impacts, according to MoDOT.

However, the green route requires the acquisition of the new lot. This land will be purchased by the city, and the former lot will be used for parking. The green route also increases the distance between the green and red routes.
