Some students abuse welfare system

Jessica Catron

Illigal and live on $28 a week? "That's my social security," Jessica Catron is a junior psychology major who has no other income. Of course, this is not the typical college student, but Catron's situation is not out of the ordinary. The typical college student is 66 percent more likely to be going hungry and 39 percent more likely to live in poverty than their non-student counterparts. This tells us that a Truman student would seriously consider the option of welfare help if it was available.

KTRM wonder aloud whether Bill Clinton's USDA is going to approve food stamps for college students. The idea is that college students who are struggling financially can use "food stamps on loan applications" to get food assistance. But for many students this option is not available. According to the Northwest Assistance Ministry (NAM) in Kansas City, only 10 to 20 percent of the many students who apply for welfare assistance in the area have been successful in getting help. The reasons are clear.

If you think that your college is a place of opportunity, you have never been to the NAM. The reason is that the college to campus assistance: that is a way to look and ask for help. You can get your applications approved for virtually nothing.

There are many reasons for this. One is that a student can never get into the trouble of falling behind in payments and get kicked out of the program. Another reason is that the student will never have to worry about losing their college loans. Finally, the student will never have to worry about the cost of the tuition. For many students, the cost of attending college is not as important as the cost of the tuition.

The major difference I observe is that the government provides the student with a free ride. This is a great opportunity for the student to get their education. And it is not only about the cost of the tuition. It is also about the cost of the books, food, and housing.

The radio show was satirical, not to be confused with the news. In the very near future Truman is going to have a radio show about the students of the University of Missouri. This type of fraud is the reason we have to re-evaluate our ideas about the role of the government in our lives and our relationship with the government. This is a call to action for all of us.

Jessica Catron is a junior political science major from Rocheport, Mo.

Faith can’t answer questions about human origin

John Hitzel

Last week, I heard a guest on KTEX-AM Roads the Radio show, "The Science Guy," who specialized in demonstrating how the Bible is a mere myth. He was invited to be on the show because he was a skeptical person who had been raised in a religious environment. He was not afraid to ask difficult questions or challenge the status quo. He believed that the Bible was not a literal book but rather a collection of stories that contained valuable lessons about life, love, and faith. He was interested in finding answers to complex questions about life, the universe, and everything in between. He believed that the Bible was not a book of science, but rather a book of wisdom, guidance, and inspiration for people of all faiths.

The show was hosted by a host who was a trained journalist and former radio producer. He had a deep understanding of human nature and was skilled at engaging listeners in meaningful discussions. The show was broadcast from a community radio station in St. Louis, Mo.

The topic for the show was "Science and Religion: How do they Coexist?" The guest on the show was a well-known author and speaker who had written several books on the subject. He was a charismatic speaker who was able to engage the audience with his knowledge and enthusiasm. He had a strong passion for science and was committed to sharing his insights with the public.

The show was broadcast live on the air, and the audience was invited to participate through calls to action. The show was also streamed live online, and listeners could participate through social media. The host encouraged the audience to ask questions and share their thoughts on the topic. He was a skilled interviewer who was able to keep the conversation flowing smoothly.

The show was recorded and broadcast on the internet, and the audience could listen to it later on. The show was also available on a podcast, and listeners could subscribe to it to keep up with the latest episodes.

The show was a success, and the audience was enthusiastic about the topic. The host and the guest were able to engage the audience with their knowledge and enthusiasm. The show was a great example of how science and religion can coexist.
