Secrets for cleaning with environmentally-friendly products
BY ANNE REBAR
Staff Reporter

A house is being painted, the beds are freshly made and the refrigerator is emptied, a filthy sink and coffee maker is dripping with coffee grounds, while an entire shelf is stacked with books for a busy day. This is a perfect example of what a housewife's day looks like. At the beginning of the day, I was thinking, “Well, I’m not going to be doing much cleaning today.”

After running for the chemical-filled cleaning products, in honor of Earth Day you can make spring home cleaning greener by grabbing natural items. Some tips for making your day easier are mentioned below. You might have been hearing about some materials you might have lying around.

Recently, a number of green cleaning services have emerged for people who use natural products in their home. Cleaning products that are environmentally friendly products can be found in stores.

Columbia resident Mary Kendrick runs her own green cleaning service out of her house in Columbia. She started the business in 2006 when she moved to Columbia from Florida. She said she started the business because she was interested in green cleaning and was looking for something to build her career. She had been buying all-natural cleaning products for awhile, but she said that when she spoke to her friends, they were skeptical about whether they actually worked. She offered to do their houses for them in exchange for two of their homes being sold in the Columbia area.

“I offered to do their houses for them in exchange for two of their homes being sold in the Columbia area,” Kendrick said. “I actually really enjoyed it, and I won, so they paid me,” Kendrick said. “I actually really enjoyed it, and, obviously, they worked.” Kendrick said she spoke to her friends, they were skeptical about whether they actually worked. She offered to do their houses for them in exchange for two of their homes being sold in the Columbia area.

She offered to do their houses for them in exchange for two of their homes being sold in the Columbia area. Kendrick said she cleaned about five to seven houses a week depending on their size, which is just enough to keep her busy, and the green products are her favorite to use.

“Certainly, the green products make my job easier, they are not harmful to the environment, and they are natural,” Kendrick said. “I was in college in the ‘70s, it wasn’t called ‘green’ then, it was just smart and cheap to do.”

Kendrick said that using green products in commercial cleaning companies like the one she worked for is much healthier for the employees because they reduce their exposure to harsh cleaning products.

“I’ve been using natural and environmentally-friendly products since I was in college in the ‘70s,” Kendrick said. “It wasn’t called ‘green’ then, it was just smart and cheap to do.”
