Talking About Our Generation: Students maintain tight grip on V-card

BY BETHILZABECK
Colombia

I tend to agree with the Beatles — all you need is love. I am a hopeless romantic, but I truly believe love is the most powerful weapon anyone can have in this world. If you go back through the history of every war and invasion, you will see that love and peace are the main reason that countries fight against each other. For that reason, I love the Ashram movement. I have heard so many inspirational stories of people who have found their peace and contentment through yoga. It is incredible how we can control our breathing and stress. This is a wonderful technique that can help you control your stress. By paying attention to your breath and focusing on it, you can reduce stress and anxiety. This is a wonderful technique that can help you maintain your V-card.

The Telemark Experiment: Oxytocin helps for love matches

Oxytocin is a particular active neurotransmitter in our brain. The brain becomes activated because of the oxytocin. These components of the brain become activated because oxytocin is released even in a kiss, during sex. Although dopamine is the pleasure neurotransmitter, oxytocin helps. Oxytocin helps when you are in love. It is released during sex. It helps to release the pleasure neurotransmitter.
