Nursing major presents challenge for students

Program is designed to prepare students for the real world

BY AMBER REESE

Senior Sarah Thompson said she almost learned her lesson about doing it all during her first year at Truman. If she could do it all over again, she would have learned her lesson the first time.

Thompson, a freshman nursing major, said she has learned a lot about herself in the first 14 weeks of her college career.

“ ’If you feel worn out, you can retake,’ and you’re out of the class,” Thompson said. “You have to go to class every day or your professor knows you’re not there.”

Thompson said she has learned that it’s important to be on time for class.

“Well, in this book’s case, it is the right answer because it’s her book. With these kinds of questions they have to be able to understand it, so they were real mad at me this time,” Gardner said.

Gardner said that for analysis questions the students really understood that the problem is demand-and-supply, and they really didn’t try to fill answers, and they obviously don’t want to have to look anything up and answer any questions ali the right answer out of what I’ve given you. If you do it that way, you’ll be able to perform when it really matters. What we’re trying to do is get these kids ahead of the game, so they can be ready to perform when it really matters.,” Thompson said.
