Truman installs sirens

Two new sirens capable of warning students of tornadoes and other emergencies

BY MAXWELL EHRSTAFF
Springfield

Truman is gearing up for the next tornado season by adding two new sirens to its existing system. The two new sirens recently were installed at Truman, and the city of Kirksville has also added an additional siren to its system. These can be used to warn students during an emergency, such as a tornado. The Department of Public Safety operates the system, and in addition to warning students, they also will serve as loudspeakers in case of emergency.

Although the system is also able to implement more sirens, no new sirens are planned. Johnson said he hopes the new sirens will be heard throughout the city.

“We are glad that more sirens are being installed because they will help serve the public.” Johnson said that the city would like to have more sirens in the future. He also said the city does not have any plans to add more sirens but would like to have more.

The National Weather Service’s statistics

The new tornado siren behind Stokes stadium, in addition to one behind the Kirk Memorial Building, can also be used as loudspeakers in case of emergency. The new siren behind Stokes stadium is intended to warn students in case of a tornado occurring. These sirens are set off only if a tornado has been detected in the area.

Johnson said that the new sirens will help students during an emergency. He said that the new sirens can be used to warn students during an emergency.

The two storms that hit Adair County last year were the same as last year. Behrens said that the storms are set off only if a tornado has been detected in the area.

The system also is able to implement more sirens, but no new sirens are planned. Johnson said he hopes the new sirens will be heard throughout the city.
