Doctors plan to open new family health facility

By TAMARA KAHNEMA Staff Reporter

The current Complete Family Medicine building on Main Street handles primary healthcare for about 30,000 people each year. The new Complete Family Medicine center, which is expected to open in February, will help to meet that need.

The current Complete Family Medicine building was built in the 1980s and has not been expanded or remodeled in that time. The new building will be built across the street from the current location.

“Patient capacity is very limited,” said Dr. David Williams, one of the physicians at Complete Family Medicine. “You can only see so many patients in a day.”

Williams said the new center will be able to see about 300 patients per day as opposed to the 175 that are seen currently. The new building will also have more space for people to wait to see their doctors.

The new building will also have more space for doctors and nurses to work. The current building is very cramped and the doctors are often expected to see more patients in a day than they can handle.

“With the new building, we will be able to provide better care and see more patients,” said Williams.

The new building will also have more room for doctors and nurses to work. The current building is very cramped and the doctors are often expected to see more patients in a day than they can handle.

“With the new building, we will be able to provide better care and see more patients,” said Williams.
