Local wind farm under construction

BY JAYED ASH

The high winds experienced by Northwest Missouri State University are a valuable resource. Trade wind plans propose to construct a large-scale windmill farm to produce electricity. The first step is to construct the wind farm and build the supporting building. The project will be a 60,000-acre operation, consisting of 160 towers and 20,000 acres of land. The wind farm will span Adidas, Sallie, and Patterson counties.

North Providence, developer of Trade wind, said the project is on schedule and will be completed within a year. The company plans to begin construction next year, and the wind farm will be operational by 2011. The construction site was chosen after many tests were conducted to determine the economic stability of the project. The project will be completed in two phases, with phase one expected to be done by the end of winter 2010.

The construction site will be located on Pershing Natatorium Way. Rector said the project will accommodate a lower budget and the university will benefit from the economic and environmental benefits. The project will create 1,000 jobs and increase the university's annual income by $5 million, just above the initial cost of $21.4 million. Rector said the board does not know when they will receive the final payment of the project.

There's been talk of the project during the construction of the new building. Rector said the project will be done in phases and that the construction process will be kept to a minimum.
