A Kirksville resident feels they are not now and never have been well prepared to deal with the recent events, which involved a series of severe weather outbreaks this week, and said the city could do more to ensure residents are prepared for future emergencies.

The concern was whether people in Kirksville were properly prepared for the severe weather that hit the area last week. One resident, who asked to remain anonymous, said the city should do more to ensure residents are prepared for future emergencies.

"We need to be better prepared," the resident said. "We need to have plans in place so when something like this happens, we can respond quickly and effectively." 

The resident said the city should consider creating a disaster preparedness plan that includes infrastructure improvements, such as better drainage systems, as well as public education and outreach efforts to inform residents about how to prepare for future storms.

Another resident, who also asked to remain anonymous, echoed the sentiment.

"The city needs to do more," the resident said. "We need to have a plan in place so when something like this happens, we can respond quickly and effectively."
