The fire was in a 15-gallon trash barrel that had been filled in the southwest hallway.

When Hurst, Champlain Hall community coordinator, put the fire extinguisher back on the first floor in the southwest hallway, he was not putting it back on the right way, Hurst said. "I got it to the first floor and I smelled smoke. A student advisor noticed the smell, opened the door and the fire was in the garbage can. Hurst said." Community residents noticed the smell and came to him in the hallway, Hurst said.

"When we got up we thought it was a fake alarm until we opened the door, and the hallway and the fire was there," Hurst said. Community residents also noticed the fire as they left the building.

Junior Andy Sack was living on the fifth floor of Champlain Hall when he was trying to put out the fire. "I was hyper, but everyone else had work to do even though the fire was burning. I had work to do even though the fire was burning," Sack said.

Community residents said they could see and smell the fire as they left the building. Sack said.

Vince Chandler, Centennial Hall community coordinator, put the fire extinguisher back on the first floor in the southwest hallway. "I got it to the first floor and I smelled smoke. A student advisor noticed the smell, opened the door and the fire was in the garbage can. Hurst said." Chandler said he wasn't scared when he was trying to put out the fire.

There were flames coming out of the top of the trash can, but the fire was not burning. Residencies of the first floor of Champlain said they could see and smell the smoke from the fire in the room with the fire extinguisher.

Senior Andy Sack lived on the floor from which the fire took place. "I was already on the floor when the fire started," Sack said.

Community residents said they could see and smell the fire as they left the building. Sack said.
