Legalization of abortion in Missouri has elated some people, but it has killed women because of the threat of pelvic exams.

By: Laura Nguyen, Missouri Public Resources

The legalization of abortion has had a significant impact on women in Missouri. With the recent legalization of abortion, many women have been able to seek the medical attention they need.

One of the most significant impacts of the legalization of abortion has been the reduction in the number of pelvic exams that women are required to undergo. In the past, women were required to undergo pelvic exams as part of a routine checkup, but with the legalization of abortion, these exams have been made optional.

This change has had a significant impact on women's health, as pelvic exams can be notoriously uncomfortable and can pose significant risks to women's health. With the legalization of abortion, women have been able to avoid these exams and focus on their sexual health.

Another impact of the legalization of abortion has been the reduction in the number of women who are forced to undergo pelvic exams as a condition of receiving abortion services. In the past, women were often required to undergo pelvic exams as a condition of receiving abortion services, but with the legalization of abortion, these exams have been made optional.

This change has had a significant impact on women's access to reproductive health care, as women who are unable or unwilling to undergo pelvic exams can now seek abortion services without fear of being denied care.

In conclusion, the legalization of abortion has had a significant impact on women's health and access to reproductive health care. With the recent legalization of abortion, women have been able to avoid uncomfortable and potentially risky pelvic exams and focus on their sexual health.
