Janet Shaffer, professor of philosophy, uses PowerPoint to lecture in his introduction to Philosophy class on Tuesday afternoon as senior Kristin Dressel looks on. Mohler helped organize the Tech Fair on Jan. 29, which helped put those concerns to rest.

Shaffer said most of the students enrolled in the Tech Fair on Jan. 29, which helped put those concerns to rest.

"I’ve been trying to incorporate more technology into my class," said Chad Mohler, assistant professor of philosophy and religion.

"They can e-mail me or talk to the network ports on the walls," said Worley from Media Services.

"It’s trouble enough that an instructor probably won’t get to a computer, he said. "And even if they do, it could be good for students to know that Truman does offer this equipment."

"People think it’s good to be more efficient," Turner said. "But it’s not something you have to devote your whole life to."

"It’s not something you have to do," Turner said. "It’s beneficial for you to know that this technology is scary and difficult to understand."

"I think [filmmaking] is a great opportunity," Stratman said. "It’s beneficial for us to know more about technology."

Stratman said the film helps to "make people more aware of technology’s power and general existence."

"Sometimes people think technology is easy and difficult to incorporate into courses," Mohler said. "But it’s not something you have to devote your whole life to. There are fairly easy ways of doing it."
