By ANDY SMART DAVIS

State officials and the Missouri Department of Transportation are reassessing safety concerns about the new Highway 63 Bypass after an accident occurred in November on the section of the bypass that connects the Missouri State Fairgrounds to Interstate 35.

The Missouri State Fairgrounds and the Missouri State Fairgrounds, which is located adjacent to the interstate, are the two major events that occur on the west side of Columbia, where the new bypass is located. The bypass is part of a larger transport network that connects different parts of the state and the country, and it is a major contributor to the economy of the region.

The bypass was opened in 2011, and it has been under continuous construction and improvement since then. The construction was financed through a combination of state and federal funds, and it was designed to alleviate traffic congestion and improve the safety of the area.

The accident occurred on the section of the bypass that connects the Missouri State Fairgrounds to Interstate 35, and it resulted in injuries to several people. The accident highlighted the need for further assessment of safety concerns, and it prompted the state officials to conduct a thorough review of the bypass.

The review will include an assessment of the safety of the intersections at Missouri State Fairgrounds, Highway 63, and Interstate 35. The review will take into account the number and severity of accidents that have occurred on the bypass, as well as the traffic patterns and congestion levels.

The review will also consider the potential for future accidents and the need for improvements to the bypass to ensure that it is safe for all users. The state officials will work with the Department of Transportation and other stakeholders to develop a plan to address any safety concerns that are identified.

In conclusion, the accident on the new Highway 63 Bypass highlights the need for continuous reassessment of safety concerns, and it underscores the importance of investing in infrastructure projects that are designed to improve safety and boost the economy of the region.
