The Kirksville Courthouse will undergo changes in about two months. Project Architect Martin Meyer said attic repairs will be made to provide stability before other structural changes can take place.

The repairs will be done on several structural components in the attic of the courthouse, which was not noted in needing repair during a study done about seven years ago, said Carlson Adams, 1st District County Commissioner. He said the reason for the delay is repairing the attic was not previously due to work going against a grant from the United States Department of Agriculture.

The pricing, about $120,000, will be paid by the county's general fund.
